EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 172 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 172

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

You are monitoring an application and receive user feedback that a specific error is spiking. You notice that the error is caused by a Service Account having insufficient permissions. You are able to solve the problem but want to be notified if the problem recurs. What should you do?

- A. In the Log Viewer, filter the logs on severity 'Error' and the name of the Service Account.
- B. Create a sink to BigQuery to export all the logs. Create a Data Studio dashboard on the exported logs.
- C. Create a custom log-based metric for the specific error to be used in an Alerting Policy.
- D. Grant Project Owner access to the Service Account.

Selected Answer: C

User wants to check the if problem recurs, that can be only possible by Alert, C is the correct option

upvoted 4 times

F4LLEN 1 year, 6 months ago

C. The keyword here is "want to be notified" that means an alert.

Selected Answer: C

C is the correct answer,

Since the problem is resolved, We need to monitor if the error recurs, hence we create a custom log based metrics to monitor only the particular service account.

You are managing a project for the Business Intelligence (BI) department in your company. A data pipeline ingests data into BigQuery via streaming. You want the users in the BI department to be able to run the custom SQL queries against the latest data in BigQuery. What should you do?

- A. Create a Data Studio dashboard that uses the related BigQuery tables as a source and give the BI team view access to the Data Studio dashboard.
- B. Create a Service Account for the BI team and distribute a new private key to each member of the BI team.
- C. Use Cloud Scheduler to schedule a batch Dataflow job to copy the data from BigQuery to the BI team's internal data warehouse.
- D. Assign the IAM role of BigQuery User to a Google Group that contains the members of the BI team.

it's A

Question 178

upvoted 1 times

Petza 3 years, 5 months ago

A. "Every time the dashboard is refreshed, it pulls new data from the view, which in turn dynamically reflects the latest data in BigQuery". Data Science on the Google Cloud Platform: Implementing End-to-End Real-Time (C)

upvoted 2 times

lxgywil 3 years, 5 months ago

The question is saying "want to be notified if the problem recurs", I don't see how A meets that requirement.
