### EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 161 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 161

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

You are performing a monthly security check of your Google Cloud environment and want to know who has access to view data stored in your Google Cloud Project. What should you do?

- A. Enable Audit Logs for all APIs that are related to data storage.
- B. Review the IAM permissions for any role that allows for data access.
- C. Review the Identity-Aware Proxy settings for each resource.
- D. Create a Data Loss Prevention job.

**Selected Answer: B**

Options and the correct answer (B) are:

Only use audit logs to look at history (PASI)

If you need current, up-to-date, info regarding permissions always go to IAM

**Selected Answer: B**

B is the one:

A. Enable Audit Logs for all APIs that are related to data storage. --> That is not the correct answer, if someone with permissions has not accessed or does not access, it will not be listed.

B. Review the IAM permissions for any role that allows for data access. --> That's correct

C. Review the Identity-Aware Proxy settings for each resource. --> Nothing relevant, Proxy? Is configured? The question don't ask or tell something about if it is configured.

D. Create a Data Loss Prevention job. --> Data Loss Prevention nothing to see here.

**Selected Answer: B**

"who has access" > We need to know present, so check IAM > it is B

If question says, check who has accessed, yes is past, audit logs

B "WHO HAS ACCESS"

? ? ? upvoted 2 times

? ? Naree 1 year, 3 months ago

Yes, that's the catch.. The question here is "Who has access?" and not "Who has accessed?"

Answer is "B".

B. 'Audit logs help you answer "who did what, where, and when?"'(from <https://cloud.google.com/logging/docs/audit>). So, not who has access, but rather who accessed.
