### EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 117 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 117

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

An employee was terminated, but their access to Google Cloud was not removed until 2 weeks later. You need to find out if this employee accessed any sensitive customer information after their termination. What should you do?

- A. View System Event Logs in Cloud Logging. Search for the user's email as the principal.
- B. View System Event Logs in Cloud Logging. Search for the service account associated with the user.
- C. View Data Access audit logs in Cloud Logging. Search for the user's email as the principal.
- D. View the Admin Activity log in Cloud Logging. Search for the service account associated with the user.

C. View Data Access audit logs in Cloud Logging. Search for the user's email as the principal.

Data Access audit logs provide detailed information about accesses to your Google Cloud resources. By searching for the terminated employee's email address as the principal in the Data Access audit logs, you can track their access to sensitive customer information after their termination. This approach allows you to specifically focus on data access, which is crucial for identifying any unauthorized or suspicious activities related to customer data.

**Selected Answer: C**

Option C is more correct , as data access logs contain API , from this you can check for it

3 upvoted 2 times

? ? sabrinakloud 1 year, 6 months ago

**Selected Answer: C**

I think option C is correct :

Data Access audit logs contain API calls that read the configuration or metadata of resources, as well as user-driven API calls that create, modify, or read user-provided resource data.

**Selected Answer: C**

C. View Data Access audit logs in Cloud Logging. Search for the user's email as the principal.

Data Access audit logs record all activity related to accessing or modifying data, including reading, writing, and deleting operations. By searching for the terminated employee's email as the principal, you can see if they accessed any sensitive customer information after their termination. System Event Logs and Admin Activity logs may not have the details of the data accessed, so Data Access audit logs are the most appropriate option in this scenario.

? ? Rutu\_98 2 years, 5 months ago

**Selected Answer: C**

ANSWER IS C

As we want to find out whether the user has accessed the data or not , so Data Access Logs would be correct option to view that

3 upvoted 2 times

? ? akshaychavan7 2 years, 5 months ago

I will go with option C.

**Selected Answer: C**

C. <https://cloud.google.com/logging/docs/audit#data-access>

? ? ? upvoted 3 times

? ? rsuresh27 2 years, 5 months ago

**Selected Answer: C**

C is the correct answer. We are trying to find out if any sensitive data was accessed. Data access logs are the only logs that show this. C is the only option that mentions data access logs.

Shouldn't the correct option be A here?

What does service account have to do here.

? ? ? upvoted 2 times

? ? amrith501 2 years, 5 months ago

It should be C User activity generally come under audit logs
