Selected Answer: B

B for me

"Folders are used to group resources that share common IAM policies"

<https://cloud.google.com/resource-manager/docs/creating-managing-folders>

Charumathi Highly Voted

Selected Answer: B

B is correct Answer,

Folders are nodes in the Cloud Platform Resource Hierarchy. A folder can contain projects, other folders, or a combination of both. Organizations can use folders to group projects under the organization node in a hierarchy. For example, your organization might contain multiple departments, each with its own set of Google Cloud resources. Folders allow you to group these resources on a per-department basis. Folders are used to group resources that share common IAM policies. While a folder can contain multiple folders or resources, a given folder or resource can have exactly one parent.

B: Folders in Google Cloud provide a way to organize resources hierarchically and apply common IAM (Identity and Access Management) policies at the folder level. This structure allows you to group resources together based on organizational needs, such as by department, teams, environments, or projects, and apply IAM policies to the entire group of resources within that folder.

By utilizing folders, you can effectively manage and enforce consistent access controls, policies, and permissions across multiple resources within the same folder, thereby fulfilling the customer's requirement of grouping resources with common IAM policies.
