EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 177 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 177

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

You are creating an application that will run on Google Kubernetes Engine. You have identified MongoDB as the most suitable database system for your application and want to deploy a managed MongoDB environment that provides a support SLA. What should you do?

- A. Create a Cloud Bigtable cluster, and use the HBase API.
- B. Deploy MongoDB Atlas from the Google Cloud Marketplace.
- C. Download a MongoDB installation package, and run it on Compute Engine instances.
- D. Download a MongoDB installation package, and run it on a Managed Instance Group.

MongoDB Atlas is actually managed and supported by third-party service providers.

I think that's it. The answer is B

upvoted 7 times

rahulrauki *Most Recent* 1 year ago

Selected Answer: B

The keyword is managed MongoDB environment, both C and D are managed by users, A is irrelevant, So B

upvoted 4 times

Selected Answer: B

B seems more correct , just deploy it from the Market place.

Anytime the question mentions a third party software, always use the cloud marketplace. Answer is B.

the question says "want to deploy a managed MongoDB environment" which means it should be managed by something, i.e compute engine or MIG.

Near Ans is C or D

I choose C - becoz no need of Mongo db running on MIG, GKE can easily handle mongoDb on compute engine.
