EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 260 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 260

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

You are building a backend service for an ecommerce platform that will persist transaction data from mobile and web clients. After the platform is launched, you expect a large volume of global transactions. Your business team wants to run SQL queries to analyze the data. You need to build a highly available and scalable data store for the platform. What should you do?

- A. Create a multi-region Cloud Spanner instance with an optimized schema.
- B. Create a multi-region Firestore database with aggregation query enabled.
- C. Create a multi-region Cloud SQL for PostgreSQL database with optimized indexes.
- D. Create a multi-region BigQuery dataset with optimized tables.

Selected Answer: A

A. Key is “large volume of global transactions”, so Cloud Spanner would be a good choice.

Selected Answer: A

PiperMe perfectly summed it up. Rember: Global + SQL = Cloud Spanner

Selected Answer: A

A. Global + SQL = Cloud Spanner

👍 ↩️ 🚩 upvoted 4 times

🗄️ 👤 KelvinToo 9 months, 3 weeks ago

Selected Answer: A

Per ChatGPT, Option A, creating a multi-region Cloud Spanner instance with an optimized schema, is the best choice for building a highly available and scalable data store that can efficiently handle global transactions and support SQL queries for analysis.
