EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 122 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 122

Topic #: 1

[\[All Associate Cloud Engineer Questions\]](#)

Your company is moving from an on-premises environment to Google Cloud. You have multiple development teams that use Cassandra environments as backend databases. They all need a development environment that is isolated from other Cassandra instances. You want to move to Google Cloud quickly and with minimal support effort. What should you do?

- A. 1. Build an instruction guide to install Cassandra on Google Cloud. 2. Make the instruction guide accessible to your developers.
- B. 1. Advise your developers to go to Cloud Marketplace. 2. Ask the developers to launch a Cassandra image for their development work.
- C. 1. Build a Cassandra Compute Engine instance and take a snapshot of it. 2. Use the snapshot to create instances for your developers.
- D. 1. Build a Cassandra Compute Engine instance and take a snapshot of it. 2. Upload the snapshot to Cloud Storage and make it accessible to your developers. 3. Build instructions to create a Compute Engine instance from the snapshot so that developers can do it themselves.

For me the answer is B for no other reason than it mentions Marketplace, which I imagine google wants you to think about and it's what the majority had selected as well.

Selected Answer: B

B
With minimal support - a click away:
<https://console.cloud.google.com/marketplace/product/bitnami-launchpad/cassandra?project=fast-art-401415>

Selected Answer: B

Key term is "move to Google Cloud quickly and with minimal support effort". Right away you can think of Google Cloud Marketplace in such situations.

Selected Answer: B

B is the correct answer as , it requires the minimal effort
upvoted 1 times

creativenets 1 year, 4 months ago

Selected Answer: D

D is the right answer not B. Remember the question states moving from on premise to gcloud. Meaning we already have servers build. We would need those image or snapshot so devs can create their own instance.

A and B - start from scratch

C - Doesn't give permissions to devs so you'll have to create the instance (more support effort)

geeroylenkins 1 year, 3 months ago

nah - D is not the right answer. D says build a Cassandra CE instance. The answer does not refer to taking a snapshot of the on-prem instances, it refers to a snapshot of a Compute Engine VM which you'd have to manually build.

B is correct

I suspect every time an answer features Google Marketplace, that is the correct answer. In these kinds of exams the purpose is often just to check general product knowledge.
