EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 258 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 258

Topic #: 1

[All Associate Cloud Engineer Questions]

You are configuring service accounts for an application that spans multiple projects. Virtual machines (VMs) running in the web-applications project need access to BigQuery datasets in the crm-databases project. You want to follow Google-recommended practices to grant access to the service account in the web-applications project. What should you do?

- A. Grant "project owner" for web-applications appropriate roles to crm-databases.
- B. Grant "project owner" role to crm-databases and the web-applications project.
- C. Grant "project owner" role to crm-databases and roles/bigquery.dataViewer role to web-applications.
- D. Grant roles/bigquery.dataViewer role to crm-databases and appropriate roles to web-applications.

Selected Answer: D
D is the least privilege and Google's recommended practices.
♣ yomi95 Most Recent ② 1 week, 5 days ago
Selected Answer: D
The question does not describe any project requiring "owner" role access, hence granting that role to any of the project would violate least privilege.
Can argue that crm-databases should have full access hence need owner role, but question does not mention specifically,
and we only assume that.

Selected Answer: A
I had my exam today and select A. I did only because of these sentence "service accounts for an application that spans
multiple projects." not 100% sure if it's correct but service account for web apps needs permissions to span projects.
Maybe I got it wrong but A makes sense.
It's tricky cause you don't know if web-apps will also do some updates on BigQuery or not.
PiperMe 7 months, 3 weeks ago
Selected Answer: D
D is the best answer and, for me, it was a process of elimination. The Project Owner role grants far-reaching permissions
beyond what's needed for reading BQ datasets, violating the principle of least privilege.

Selected Answer: A
Interpreting 'Project Owner' as the responsible entity, and not as the 'Project Owner' IAM role in Google Cloud: In this case, the instruction directs the person or entity managing the 'web-applications' project to grant appropriate roles for accessing
the 'crm-databases' project. If this interpretation aligns with the intent of Option A, then it would indeed be a correct
approach. Otherwise, none of the provided options would be correct.
approach. Otherwise, none of the provided options would be correct.
