📄 **EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 190 DISCUSSION**

Actual exam question from Google's Associate Cloud Engineer

Question #: 190

Topic #: 1

[All Associate Cloud Engineer Questions]

The sales team has a project named Sales Data Digest that has the ID acme-data-digest. You need to set up similar Google Cloud resources for the marketing team but their resources must be organized independently of the sales team. What should you do?

A. Grant the Project Editor role to the Marketing team for acme-data-digest.

B. Create a Project Lien on acme-data-digest and then grant the Project Editor role to the Marketing team.

C. Create another project with the ID acme-marketing-data-digest for the Marketing team and deploy the resources there.

D. Create a new project named Marketing Data Digest and use the ID acme-data-digest. Grant the Project Editor role to the Marketing team.

Answer should be C because the resources for the marketing team should be independent from the Sales team. Resources are tied and separated by projects.

Creating a separate project for the Marketing team allows you to organize their resources independently of the Sales team, which is a best practice for resource management and access control.
Granting the Project Editor role to the Marketing team for the Sales team's project (acme-data-digest) would give them unnecessary access to Sales team resources (option A).
Creating a Project Lien (option B) is not relevant in this scenario, as it's used to prevent resource deletion, not to manage access or organization.
Using the same ID (acme-data-digest) for a new project (option D) could lead to confusion and conflicts, and is not a recommended practice.
By creating a separate project for the Marketing team, you can ensure clear organization, access control, and resource management for both teams.

C. Create another project with the ID acme-marketing-data-digest for the Marketing team and deploy the resources there.

Explanation:
Option C is the correct choice for organizing resources independently for the marketing team. By creating a separate project (acme-marketing-data-digest), you ensure that the marketing team's resources are isolated from the sales team's resources. This approach provides a clean and distinct organizational structure for each team.

Options A, B, and D involve using the same project (acme-data-digest) for both teams, which could lead to potential conflicts and lack of resource isolation. Option B suggests using a project lien, but liens are typically used to prevent the deletion of projects and don't provide the organizational separation needed for independent teams.
