☐ **EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 265 DISCUSSION**

Actual exam question from Google's Associate Cloud Engineer

Question #: 265

Topic #: 1

[All Associate Cloud Engineer Questions]

You just installed the Google Cloud CLI on your new corporate laptop. You need to list the existing instances of your company on Google Cloud. What must you do before you run the gcloud compute instances list command? (Choose two.)

A. Run gcloud auth login, enter your login credentials in the dialog window, and paste the received login token to gcloud CLI.

B. Create a Google Cloud service account, and download the service account key. Place the key file in a folder on your machine where gcloud CLI can find it.

C. Download your Cloud Identity user account key. Place the key file in a folder on your machine where gcloud CLI can find it.

D. Run gcloud config set compute/zone $my_zone to set the default zone for gcloud CLI.

E. Run gcloud config set project $my_project to set the default project for gcloud CLI.

Selected Answer: A

AE (I couldn't select both).
In addition to authenticating your account (Option A) to ensure the necessary permissions, setting the default project using `gcloud config set project [Your_Project_ID]` is crucial. It guarantees that subsequent commands are executed within the intended project's context. Both steps are essential before listing instances in Google Cloud Platform: proper authentication for permissions and setting the default project to ensure the commands run in the correct project context.

D is not correct, as it's optional to set the zone.
