📄 EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 180 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 180

Topic #: 1

[All Associate Cloud Engineer Questions]

You have just created a new project which will be used to deploy a globally distributed application. You will use Cloud Spanner for data storage. You want to create a Cloud Spanner instance. You want to perform the first step in preparation of creating the instance. What should you do?

A. Enable the Cloud Spanner API.

B. Configure your Cloud Spanner instance to be multi-regional.

C. Create a new VPC network with subnetworks in all desired regions.

D. Grant yourself the IAM role of Cloud Spanner Admin.

B looks more like it.

When creating a Cloud Spanner instance, you configure the instance details first before enabling the Cloud Spanner API, if its not enabled by default i.e. if this is the first time you are using Cloud Spanner in your project.

`Selected Answer: A`

A seems right

👍 ↩ 🚩 upvoted 1 times

☐ 👤 bobthebuilder55110 2 years, 2 months ago

`Selected Answer: B`

Answer must be B , here is why?

I was confused between A and B but I tested this by creating a new project, when you go to spanner and click on create a spanner instance it automatically enables the API for you and you can all see this activity on the notification panel on the top right along with the visibility of this message clearly on that instance page as well, First it will auto-enable the API and then It will give you an option to select multi-region, Now the questions say your first step that has to be multi-region since enabling the API was done by google automatically and none other options makes sense here.

👍 ↩ 🚩 upvoted 3 times

☐ 👤 bobthebuilder55110 2 years, 2 months ago

Correction : It's A

Since it does not specify if we are using command line tool or UI, if you are using command line tool then you will have

to enable this.

⊟ 👤 **mani098** 2 years, 4 months ago

Selected Answer: C

because Api auto enabled when you click create new instance on cloud spanner UI

👍 ↩ 🚩 upvoted 2 times

⊟ 👤 **mav3r1ck** 2 years, 2 months ago

This is TRUE.
Verified this:
- Go to your GCP project and verify that "Cloud Spanner API" is NOT enabled.
- Go to Cloud Spanner. Click "Create Instance".
- Check back again the "Cloud Spanner API" , you will see that status is "API Enabled".

Selected Answer: A

Answer : A --> Tested

👍 ↩ 🚩 upvoted 4 times

⊟ 👤 **bobthebuilder55110** 2 years, 2 months ago

How ? I tested this as well and It auto enables the API. Unless this is a new feature by google and the question is old then I am not sure.

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **adarsh4503** 2 years, 1 month ago

If you used CLI then the API would have to be enabled manually.

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **Random_Mane** 2 years, 5 months ago

Selected Answer: A

Enabling API is the first step

👍 ↩ 🚩 upvoted 2 times

⊟ 👤 **jblima** 2 years, 5 months ago

Selected Answer: A

A - I tested...

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **parag09** 2 years, 5 months ago

A:-tested it need to Enable Api first

👍 ↩ 🚩 upvoted 1 times

⊟ 👤 **sivasan** 2 years, 5 months ago

shoudnt the ans be enable cloud spanner API.Option A

👍 ↩ 🚩 upvoted 1 times
