It could be a way for Google to identify people who have used this resource and invalidate their exam results. Best just not to click on the "solution" at all.

`Selected Answer: A`
Answer A. Filter the Activity log to view the Configuration category. Filter the Resource type to Service Account.

The Activity log is the primary tool for viewing and analyzing activity within a Google Cloud project, including all Service Account-related activity. By filtering the Activity log to view the Configuration category and filtering the Resource type to Service Account, you can see when a Service Account was created, updated, or deleted, along with other related metadata such as the user who performed the action and the IP address from which the action was performed.
