EXAM ASSOCIATE CLOUD ENGINEER TOPIC 1 QUESTION 181 DISCUSSION

Actual exam question from Google's Associate Cloud Engineer

Question #: 181

Topic #: 1

[All Associate Cloud Engineer Questions]

You have created a new project in Google Cloud through the gcloud command line interface (CLI) and linked a billing account. You need to create a new Compute
Engine instance using the CLI. You need to perform the prerequisite steps. What should you do?

A. Create a Cloud Monitoring Workspace.

B. Create a VPC network in the project.

C. Enable the compute googleapis.com API.

D. Grant yourself the IAM role of Computer Admin.

agree with C, there are few API enabled by default and the Compute engine API is not a part of them. do not be confused, personally, I thought this API should be part of the basic APIs enabled but it it not.

Selected Answer: C

The compute.googleapis.com API must be enabled in your project before you can utilize Compute Engine features and issue commands to create instances.

When you create a new project on the GCP, a default VPC network is automatically created for you.

Yeah, but who uses the default VPC and CIDR ranges? Technically you could, but its not best practice and RARELY would fit in with a companies existing infrastructure.
